

Control

Performing electrical panels for machine control from simple boxes (small machinery) to cabinet for the control of several machines or production lines.

Programming of programmable robot, communication with other machines and networking.

Installation of security systems for the operator.

Instrumentation control panels for the display of small processes.

Monitoring

Industrial Automation has applied all its resources to research and development of control, in SRM ROBOTICS bet for monitoring both the machine and plant getting with this improved quality, less cost, product control, maintenance control, etc. For this, SRM ROBOTICS develops different jobs:

- Programming touchscreens or alphanumeric.
- Display production processes from PC or graphic screen.
- Machine control by PC, telephone, radio or modem.
