

Engineering

We develop engineering projects both production lines and special machinery, and equipment end of lines as palletizers, packing, etc.

From the workplace where workers make manual assembly work and the product is automatically mobilized, until fully automatic production line where the movement and handling of the product is done automatically.

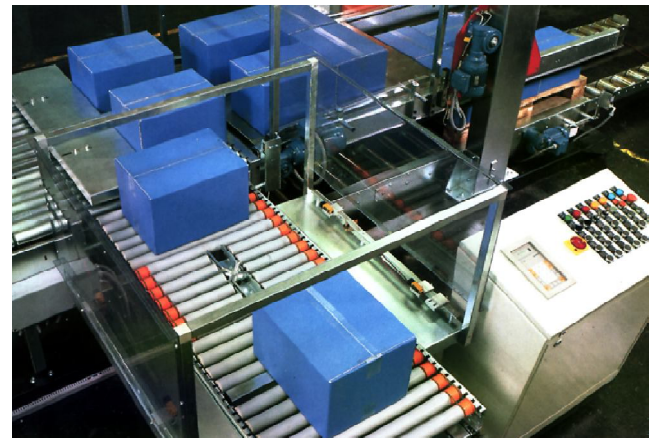

We modify machinery in production lines through improvements, boths mechanical and electrical.

Development

We manufacture machinery since the scheme using standar components and making in our factory the required parts for the assembly, special pieces for machining, and for the finishing, obtain in this way a warranty in our develop work.

We perform concatenation works of our machinery, both mechanically and electrically. In this way we can pass the work from one machine to another.

Maintenance

Disposing to qualified personnel, we can offer preventive maintenance or at stop lines both mechanical and electrical or electronic, offering a quality service and speed in our repairs.
